Evercast

A better way to create

Presentation to the Television Academy Arts & Sciences Peer Group

March 11th, 2021

Why Evercast?

A true turn-key solution, Evercast enables creative professionals to optimize their workflows through advanced collaborative technology that mirrors the ease and value of a team working together shoulder to shoulder.

Fun Facts

Evercast was founded in 2015.

In 2020, Evercast revenue grew over 1400%.

Maintains top security approval from every major studio & streaming service.

Signed multiple enterprise deals with entertainment studios, advertising agencies, gaming & animation companies.

Evercast is used at all levels of facilities & studios in 14 different countries across the advertising, gaming & entertainment industries.

Features

Evercast combines video conferencing, HD live-streaming, and full-spectrum audio in one.

- 24/7 Support, real time, in room Evercast employee support staff,

- Supports multiple simultaneous HD screen shares and/or media streams

- Stereo audio and 5.1 surround sound on Windows

- Average latency of 150ms, not tied to an office or home office

- No media file sharing or uploading necessary

- Cloud native architecture, encrypted end to end, geo-diversity

- Secure recording and storage of recorded sessions along with time-stamped notes

- The ability to stream from air-gapped machines, breakout boxes, and reference monitors

- Works with remote tools like HP Remote Boost

- Security approval from all major film/television studios

- On-set real time collaboration

HP ZCentral Remote Boost and Evercast

ZCentral Remote Boost is an ideal tool for editors and artists to work remotely and even to share their screens with the broader team for collaboration and reviews.

Evercast Broadcaster Software (EBS) can add to that with video/discussion and the ability to live-stream multiple sources of content – either from your computer or direct from camera.

Together it's just like being in a studio with your team when content is remote – with access to all the powerful compute, software and video content as if you were on site. Allows for maximum flexibility and security.
